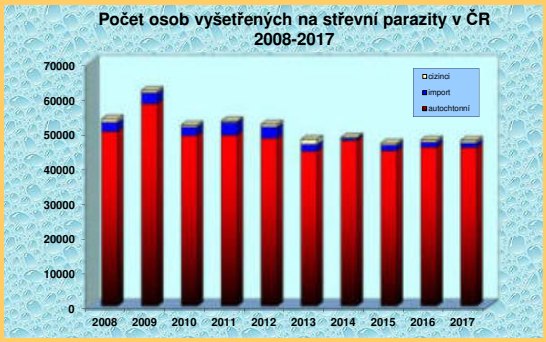
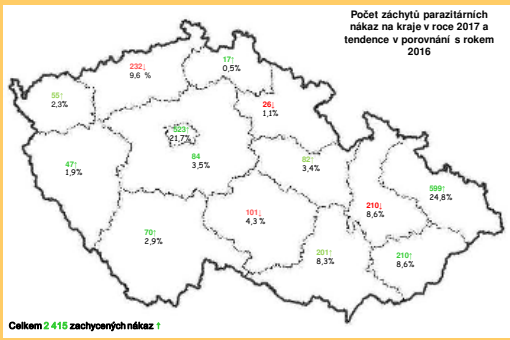
Střevní parazitózy v ČR nejen v roce 2017

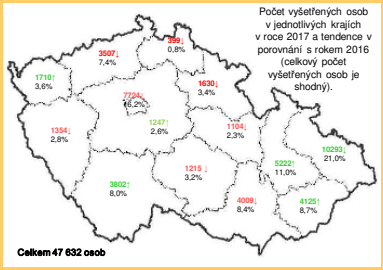
Zpráva NRL pro diagnostiku střevních parazitóz

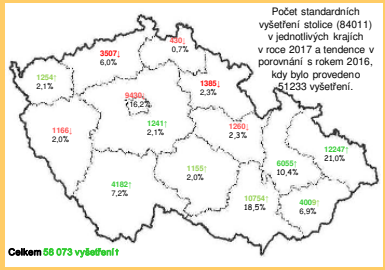
Zuzana Hůzová

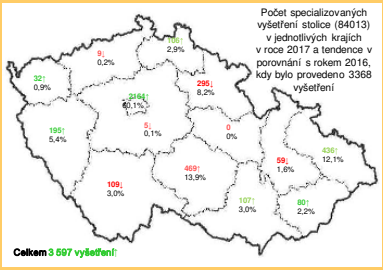
Zdravotní ústav se sídlem v Ústí nad Labem, oddělení parazitologie, mykologie a mykobakteriologie Praha, Sokolovská 60, 186 00 Praha 8

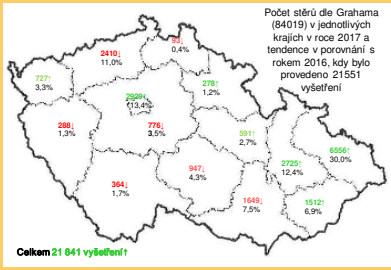


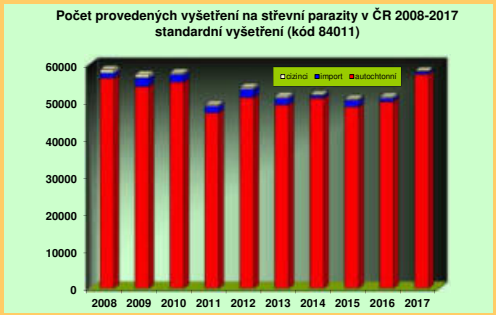


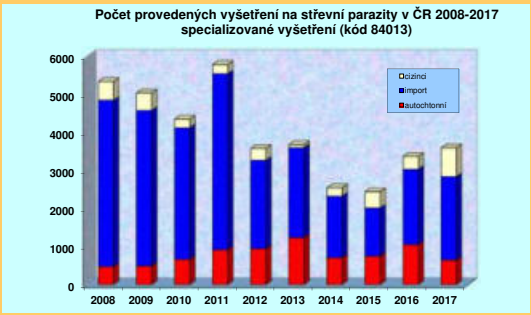


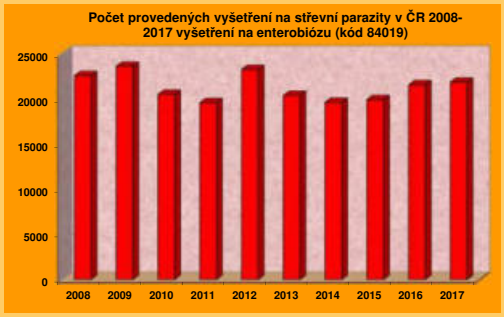


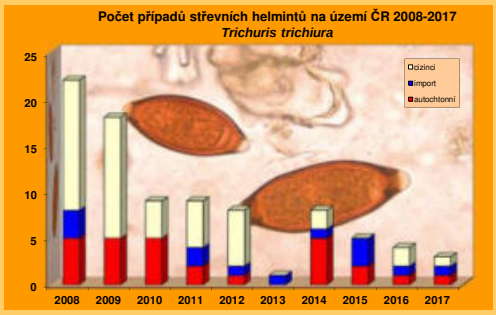


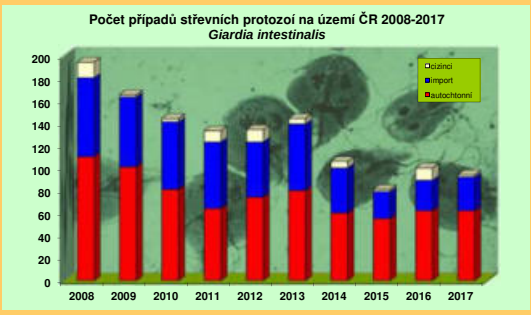


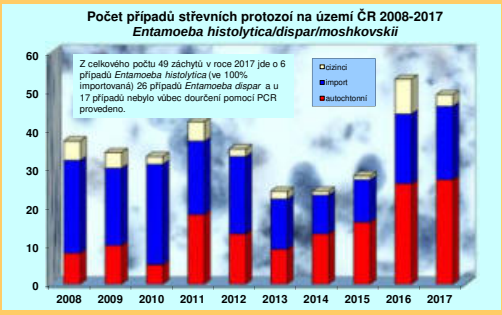


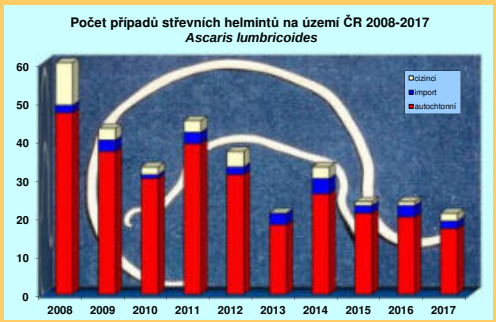






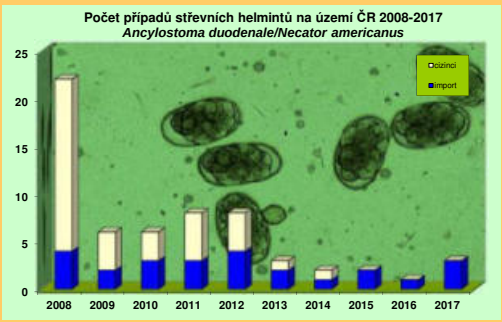


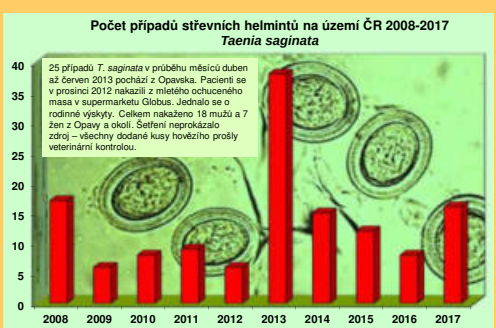


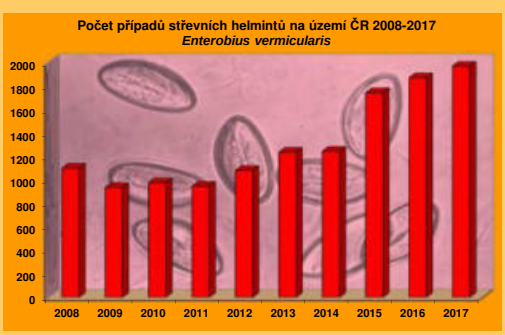


Celkem vyšetřeno 47 632↓ osob. Provedeno 97 351↑ výkonů
Z toho je 95 % uváděno jako vyšetření našinců bez cestovatelské anamnézy (vztaženo k roku 2016).

Žebříček nejúspěšnějších helmintů
v ČR za rok 2017:
1964↑ - Enterobius vermicularis
21↓ - *Ascaris lumbricoides*
14↑ - *Taenia saginata*/sp. (8/6)
3↓ - *Ancylostoma/Necator*
3↓ - *Trichuris trichiura*
2 - *Hymenolepis nana*





Žebříček nejúspěšnějších parazitických protozoí
v ČR za rok 2017:
124↓ - Endolimax nana
94↓ - Giardia intestinalis
84↑ - *Entamoeba coli*
49↓ - Entamoeba hist/dispar/ nedourčeno (6/26/17)
28↑ - Entamoeba hartmanni
8↑ - Dientamoeba fragilis
8↑ - Jodamoeba bütstchlii
7↑ - Chilomastix mesnili
4↓ - Cryptosporidium sp.
2↓ - Cyclospora cayetanensis
1↑ – Isospora belli


V roce 2017 nalezlo 66↑ laboratoří ČR celkem 2 415↓střevních parazitů, tj. průměrně 36↓ nálezů na jednu laboratoř (v roce 2016 vycházelo 38 nálezů na laboratoř).
